Let me call Ken and Coach tomorrow and find out what's up. We can re-tool the plan if we have to.

Respectfully,

Subject: Unresponsive sponsor

Andy,

Since the last semester we had secured our own application within the Chirpstack account already provided by Go Create with all our own app and device eui keys. As we continue to improve upon the strides made last semester I have not been able to connect to the gateway with our node and the password provided originally has changed. I have not received responses from the Go Create sponsor. I am not sure what steps may need to be taken on my end to continue moving forward. I think I may pursue deploying our own gateway but this will add unexpected workload and time constraints to the EE side of the Smart Park project. Do you have any advice on how to handle this situation going forward?

Thank you,

Damian Avery
